Implement clustering techniques – Hierarchical and K-Means

a) Hierarchical Clustering #

Load the iris dataset data(iris)

Use only the numeric columns for clustering (exclude the Species column)

```
iris_data <- iris[, -5]
```

Standardize the data iris_scaled

```
<- scale(iris_data)
```

Compute the distance matrix distance_matrix <-

```
dist(iris_scaled, method = "euclidean")
```

Perform hierarchical clustering using the "complete" linkage method hc_complete

```
<- hclust(distance_matrix, method = "complete")
```

Plot the dendrogram

```
plot(hc_complete, main = "Hierarchical Clustering Dendrogram", xlab = "", sub = "", cex = 0.6)
```

Cut the tree to form 3 clusters

```
clusters <- cutree(hc_complete, k = 3) #
```

Print the cluster memberships

```
print(clusters)
```

Add the clusters to the original dataset iris\$Cluster

```
<- as.factor(clusters)
```

Display the first few rows of the updated dataset

head(iris) **Output :**

Hierarchical Clustering Dendrogram

b) K-Means Clustering

Load the iris dataset

```
data(iris)
```

Use only the numeric columns for clustering (exclude the Species column)

```
iris_data <- iris[, -5]
```

```
# Standardize the data iris_scaled <- scale(iris_data) # Set the
number of clusters set.seed(123) # For reproducibility k <- 3
```

Number of clusters # Perform K-Means clustering

```
kmeans_result <- kmeans(iris_scaled, centers = k, nstart = 25)
```

```
# Print the K-Means result print(kmeans_result)
```

Print the cluster centers

```
print(kmeans_result$centers)
```

Add the cluster assignments to the original dataset iris\$Cluster <-

```
as.factor(kmeans_result$cluster) # Display the first few rows of the updated dataset
```

```
head(iris) # Plot the clusters library(ggplot2) ggplot(iris, aes(x = Sepal.Length, y =
```

```
Sepal.Width, color = Cluster)) + geom_point(size = 3) + labs(title = "K-Means
Clustering of Iris Dataset", x = "Sepal Length", y = "Sepal Width")
```

Output :

```
[145] 3 3 4 3 3 4

within cluster sum of squares by cluster:
[1] 47.35062 44.08754 47.45019
(between_SS / total_SS = 76.7 %)
